

# 2024 Wisconsin Corn Herbicide Survey

The objective of this survey is to document herbicide programs used in different Wisconsin corn production systems (e.g., tillage scenarios, atrazine prohibition areas, and silage vs grain). This survey is being conducted by Daniel Zhu, a graduate student in Dr. Rodrigo Werle's WiscWeeds Lab. Results will be published as a part of Daniel's MS thesis at UW-Madison. Your participation is critical for informing our research decisions, assisting us with making better recommendations, and allowing us to better provide data for our stakeholders. Please fill out this survey and send it to fellow corn growers or consultants as well. Please mail the survey addressed to **Daniel Zhu at 1575 Linden Dr, Madison, WI 53706** or scan it and send it via email to **dqzhu@wisc.edu**. Thank you for your time and support.

For 2024 ONLY, indicate if you farmed and/or managed the following CORN cropping scenario(s). If you answered Yes, please indicate the number of acres then answer the follow up questions. If you answered No, skip the rest of the questions in the box.

Scenarios include whether you are INSIDE or OUTSIDE of an atrazine prohibition area, whether the corn was destined for GRAIN or SILAGE, and whether the field was NO TILL, STRIP TILL, or TILL (includes conventional tillage, conservation tillage (except strip till), and other tillage practices). For costs, include the ENTIRE cost including application and adjuvants etc.

**Weed control ranks examples: 10 (Excellent), 8 (Good), 6 (Fair), 4 (Poor), 2 (Very Poor), 1 (No Control).**
